

Use-Case Flow — Validate Vehicle Entry

Preconditions

- The vehicle has arrived at the parking entrance.
- The gate camera is operational.
- The vehicle's parking reservation is available in the system.

Main Success Scenario

1. The vehicle arrives at the parking entrance.
2. The gate camera scans the vehicle's number plate.
3. The system receives the scanned number plate.
4. The system checks the vehicle's parking reservation.
5. The system verifies that the reservation is valid.
6. The system records the vehicle entry time.
7. The system opens the parking gate.
8. The system confirms successful vehicle entry.

Postconditions

- The vehicle entry is successfully recorded.
- The vehicle's entry time is stored in the system.
- The parking bay is associated with the vehicle's active reservation.

Alternate Flow — Invalid Reservation

5a. Invalid or Missing Reservation

1. The system detects that the vehicle does not have a valid reservation.
2. The system denies vehicle entry.
3. The system displays an appropriate message.
4. The parking warden is notified of the invalid entry attempt.
